

Learning to Estimate Forces for Safe Tool Usage

Erik Berger¹, Steve Grehl¹, David Vogt¹, Bernhard Jung¹ and Heni Ben Amor²

- **Robot** FT-sensors or mass-acceleration model?
- **Human** sense of force based on previous experience

→ Task specific force model

- UR5 utilizing a conventional torque wrench
- No prior knowledge about robot platform
- 105 sensors (redundant and negligible)

Which sensors are suitable for model learning?

¹ Technical University Bergakademie Freiberg, Freiberg, Germany

² Arizona State University, Tempe, United States of America
